

# DOWNLOAD VIDEOS FROM THE WEB P.1

Have you ever wanted to download a video from YouTube to use in that PowerPoint for class? Follow the directions below to learn how:

1. Point your browser to the video site of your choice and browse to the video you would like to download/ save.
2. Click in the address bar and select the entire URL of the video and press Ctrl + C on the keyboard, or right click the selected address and click copy, to copy the address to the clipboard.
3. Point your browser to <http://vconvert.net/> and paste the URL into the URL text box (shown right).
4. Select the type of file you would like to save the video as.

- a. Windows (Recommended) – will play with Windows Media Player and most other video players compatible with Windows
  - b. Mac – will play with Quicktime player (Windows or Mac version) and most other video players compatible with Mac
  - c. iPod/PSP/iPhone – will play on the iPod, PSP, or iPhone, as well as most other players compatible with Windows or Mac
  - d. Mobile – will play on most cell-phones, and special video players that support this file type
  - e. Audio Only – saved the audio only and will store the file as an mp3 which is compatible with virtually any/all media players
  - f. Flash – will play using the Adobe Flash plug-in within any browser
5. Once you've copied the URL and made your convert/ file type click .
  6. You will get a message saying *Preparing files*, and then a message that says *Please download the file*. Click  to download the file to your selected location.
